

PACKER

Founded in 1845, The Packer Collegiate Institute is the oldest independent school in Brooklyn. A co-educational, college preparatory school enrolling students from Preschool through Grade 12, Packer is located in Brooklyn Heights, one subway stop from Manhattan.

Our Mission

Packer educates students to:

- think deeply
- listen actively
- speak courageously
- act with purpose and heart

Our Vision for Educational Excellence

Packer is a diverse community of learners in which each person is valued and challenged. We strive to be knowledgeable, empathetic, and engaged members of an interconnected and dynamic world.

How We Do This

We inspire joy and purpose through transformative learning experiences that foster both intellectual development and social-emotional growth. We prioritize collaboration, reflection, and continuous improvement in service of student learning.

Our Values

Scholarship: Promoting rigorous inquiry leading to deep understanding.

Creativity: Fostering discovery, imagination, and innovation.

Equity: Embracing diversity, expanding access, and nurturing belonging.

Integrity: Cultivating decency, honesty, grace, and personal responsibility.

Joy: Creating a community of positive energy and lively engagement.

Respect: Caring for oneself, for one another, and for the world around us.

Upper School Overview

Packer's Upper School faculty, over 88% of whom hold advanced degrees, are dedicated to helping students to develop strengths and interests in academic, artistic, and athletic pursuits, as well as to grow through leadership and service. Our program offers interdisciplinary and project-based learning, the integration of technology, the opportunity for study beyond the walls of the school, and a balance between core academic requirements and student-selected areas of study. Packer's Upper School provides a learning environment that supports students in developing as individuals as well as members of a community. This approach fosters their development as critical thinkers, compassionate citizens, and engaged learners who understand the connection between what is learned in the classroom and lived in the world.

Community

Our commitment to the diversity of the people in our community encompasses every social identifier, and regarding race specifically, our student body consists of 40% students of color. Upper School students commute from all parts of Brooklyn and Manhattan, and smaller numbers come from as far away as the Bronx, Long Island, and New Jersey. In 2021-22 28% percent of our students received financial aid. Our community is strengthened by the inclusion of students from Prep for Prep, Oliver Scholars, A Better Chance, and other educational-access programs.

Upper School Curriculum

Packer does not offer AP courses. In their stead, we offer Advanced Topics (AT) classes, faculty-authored courses of equal or greater academic rigor.

AT courses are offered in English, American Government, European History, Archival Research, History of Slavery, History of the Middle East, Calculus I, Calculus I/II, Mathematical Proof and Structure, Mathematical Symmetry and Transformations, Statistics, Biology, Inorganic Chemistry, Organic Chemistry, Physics, Chinese, French, Latin, Spanish, Computer Science, Studio Art, Choreography, and Photography.
(*See insert.*)

A schedule of five academic subjects is required for most students. Given the rigor of our overall program and our students' dedication to significant co-curricular endeavors, special permission is required for juniors to take more than two AT Classes or for seniors to take more than three. We also offer a three-year Independent Science Research Program (*see opposite page*).

In evaluating Packer transcripts, it is important to understand that while there are multiple options for underclassmen to enroll in accelerated courses in math and science, prior to eleventh grade, there are no such opportunities in English and history.

Graduation Requirements

Students typically complete courses of study that exceed the minimum requirements noted below. They also complete a community engagement requirement.

English: 4	History/Social Science: 3	Electives: 2
Mathematics: 3	Computer Science: .5	Health: 1
World Language: 3	Arts (Visual Arts, Dance, Music, and Theater): 2	Physical Education: 4
Science: 3		

Grading System

- Semester calendar
- Letter grades A through F, including pluses and minuses (*see grade distribution below*)
- Final grades for all courses excluding health and physical education are factored into an unweighted grade point average (GPA)
- Packer does not report class rank

Packer pivoted to remote learning mid-March 2020 following our school closure due to Covid-19. Classes were held synchronously and asynchronously to continue to meet our curricular goals and provide the most robust learning experience. (All students were graded on a P/F basis for the spring semester of 2019-2020).

Disciplinary Records

We believe students should respond with integrity to disciplinary questions from schools to which they apply, taking the time to reflect on the ways in which they have grown as individuals and as members of the community. Matters of discipline are not recorded on student transcripts. However, depending on the nature and gravity of the incident(s), Packer may choose to proactively report a student's disciplinary infraction to colleges.

Enrollment

Pre-Kindergarten through Twelfth Grade: 1,076 students
Upper School: 399 students
Class of 2023: 96 students

Accreditation

New York State Association of Independent Schools (NYSAIS)

Grade Distribution 2021-22

Semester grade distribution for courses in which current juniors and seniors were enrolled during academic year 2021-22:

	A	A-	B+	B	B-	C+	C	C-	D+	D	D-	F
English	226	89	45	30	13	1	5	4	1	0	0	0
World Language	188	54	25	16	8	1	0	0	0	0	0	0
History	179	86	52	17	3	4	0	1	1	0	0	0
Math	213	95	61	35	14	7	6	0	0	0	0	0
Science	343	52	17	13	3	1	3	0	0	0	0	0
Computer Science	19	8	2	0	0	0	0	0	0	0	0	0
Arts	175	27	7	0	0	1	0	0	0	0	0	0

Features of Packer's Upper School

The Packer Symposium

For two weeks, regular classes are supplanted by an array of intensive educational experiences that extend beyond the regular classroom. The Packer Symposium is defined by creative research, study, discussion, and action that engage Packer students and faculty in meaningful collaboration and intensive learning.

The New York Experience: Freshmen participate in an extensive investigation of New York City. Students choose from several distinct strands of study, each of which explores the city's culture, history, or sustainability.

Travel Program: As juniors, the Class of 2023 traveled to Puerto Rico and California. In California, one group explored the complexities of immigration along the U. S. border

with Mexico, while the other examined environmental sustainability efforts along the central coast. In Puerto Rico, two groups learned about the challenges the island's people face as they rebuild after Hurricane Maria. Each group worked with a different community organization constructing homes for families still without permanent housing. The cost of the program for all students is included as part of Packer's regular tuition.

Individual Explorations: As seniors, the Class of 2023 will select from course offerings shaped by the interests and passions of both students and teachers. Through in-depth study, discussions with scholars and experts, and field trips around the region, students explore a variety of topics, including scientific innovation, game design, the philosophy of happiness, and the intersection of physics and music.

Independent Science Research Program

Packer offers a three-year sequence of study in the physical and life sciences, leading to two school years and two summers of laboratory research with professional scientists.

Students in this program have received national recognition as well as credited publication in prominent scientific journals. Some may also receive college credit through the SUNY system.

Student Leadership

Peer Leadership and Peer Support programs offer students the opportunity to serve as mentors to younger students. Peer Leaders/Peer Supporters are selected by faculty and receive leadership training so they may provide a range of services, including tutoring and mediation, to younger students as they socialize and acclimate to Middle and Upper School life.

Global Opportunities

Packer's Global Travel Programs offer students the opportunity to use the world as a classroom. These programs are mission-driven and are inspired by our commitment to expanding our curricular and co-curricular goals. We believe that stepping

outside the walls of Packer gives us the unique opportunity to create bonds, deepen learning, and spark a global perspective. Through the examinations of issues and subjects, passions, or connections with others, our Global Travel Programs develop awareness of important issues impacting our world, cultural competency and global literacy, engagement in another language, and empathy and responsibility. Due to Covid-19 these opportunities were limited.

Packer's Core Values

Scholarship

Creativity

Equity

Integrity

Joy

Respect

Independent Study and Senior Thesis

These two programs allow students to personalize and deepen their individual interests while working one-on-one with a selected faculty mentor. All students present their research publicly and seniors are awarded academic credit for participating in the semester-long Senior Thesis program.

Packer in Action Program

The National Association of Independent Schools (NAIS) has long recognized Packer for its inclusive programming and its integration of diversity learning into every aspect of community

life. A committee of students and adults collaborates in preparing an annual exploration in which the entire school participates in critical conversations about race, gender, equity, and diversity. The program includes seminars, presentations, and workshops developed and facilitated by Packer faculty and students, as well as by nationally recognized speakers, activists, and organizations.

Packer's Class of 2022

College Enrollment

Listed below are the colleges and universities to which Packer graduates have matriculated in the past five years. Colleges in bold have enrolled one or more members of the class of 2022.

American University (2)
 Amherst College (4)
 Arizona State University (1)
Bard College (3)
Barnard College (5)
Bates College (10)

 Yale University (8)

Packer's Advanced Topics Curriculum

The Advanced Topics (AT) Program is defined by the following characteristics: intellectual rigor; authentic real world work; demonstrations of mastery; performance-based learning featuring student-driven design, analysis and synthesis of varied texts, active scholarship, and original research. In accordance with Packer's mission, AT courses require students to *think deeply, speak confidently, and act with purpose and heart.*

Advanced Topics in American Government (AT American Government)

This course explores the philosophical and constitutional underpinnings of the U.S. political system. Since we live in an interdependent world, an important objective of the course is to situate our government in a global context. Through an examination of politics in the U.S. and case studies of government in other countries, students will develop a vocabulary and conceptual framework that will enable them to better analyze political developments at home and abroad. As a culminating project, students will also conduct and present scholarly research on an urgent public policy issue of their choice.

Advanced Topics in Archival Research (AT Archival Research)

In this course, students will conduct original research to gain insight into history by using materials held in The Packer Collegiate Institute's archives, located at the Brooklyn Historical Society. Students will present their research in two forms: first, in the composition of a scholarly essay suitable for submission to *The Concord Review* or comparable journals that publish high-quality work by high school students; and, second, in a public presentation at a research seminar held at the end of the year.

Advanced Topics in Biology (AT Biology)

In this year-long course, students will develop their understanding of biology by using the framework of Claim, Evidence, and Reasoning (CER) in a collaborative classroom environment. Students will construct and communicate evidence-based models they develop either by examining historical data or by generating their own evidence. The sequence of units will parallel historical scientific thinking to provide students with an opportunity to understand how scientists come to know and build models. Grounded in evolutionary thinking, students will explore experimental methods and statistical analyses common in biology and answer questions such as: how do cells communicate on a molecular basis, how can we use our understanding of cellular communication and gene expression to engineer genes using biotechnology, and how does life use and transfer energy?

Advanced Topics in Chinese Conversation and Culture (AT Chinese)

Chinese Conversation and Culture is a full-year course intended for qualified students who are interested in completing Chinese language studies equivalent to a level 200 college course. The objectives are to refine and further develop students' abilities to conduct semi-formal or formal discussions about social-cultural issues, to increase vocabulary by making context-based guesses about the meaning of a new word, to write and present fully developed narratives and structured arguments, and to learn to appreciate Chinese literature. This course is conducted entirely in Chinese.

Advanced Topics in Choreography (AT Choreography)

This course provides the opportunity for the in-depth study of choreography, improvisation, performance skills, and personal creative process through advanced compositional assignments and performances. A major focus of the class is the required participation as a choreographer in the Dance Concert and other showcases, which includes a good deal of time in mandatory after-school rehearsals. While learning the craft of composition or "dance-making" is the most obvious element of this course, students also learn about costume design, lighting, leadership, and collaborative concert production. Attendance at one performance of a professional dance company and individual conferences with the teacher are also required.

Advanced Topics in Computer Science (AT Computer Science: Data Science and AT Computer Science: Web Technologies)

Packer offers two advanced Computer Science Courses for students. These courses emphasize student independence, the importance of reading and generating documentation, and growing strong debugging skills. In the Data Science course, students explore the main ideas of data science through project-based explorations. Students develop an understanding of data analysis, sampling, correlation/causation, bias and uncertainty, probability, modeling with data, making and evaluating data-based arguments, and the power of data in society. The course explores this topic through Python coding and specifically the pandas and matplotlib packages. Students engage in algorithm design and object oriented approaches by developing a portfolio of complex student-driven projects. In the Web Technologies course, students learn how to develop a Full Stack Website. They begin with front end development utilizing HTML, CSS and JavaScript to create user friendly, well structured websites. They progress to back end development learning to use

databases, web frameworks and REST API approaches to create more complex functional websites. Students engage in an in-depth investigation and a final project website design challenge to showcase their advanced understanding.

Advanced Topics in Calculus I and I/II (AT Calculus I and AT Calculus I/II)

AT Calculus I and AT Calculus I/II explore much of the content typically covered in the first semester and first year of college, respectively. Learning will be discovery-based and will emphasize a multi-representational approach to calculus, in which students learn to express concepts graphically, numerically, analytically, and verbally. Abstract thinking, mathematical modeling, and original research will be key components of the class. The accelerated pace of AT Calculus I/II allows students to explore polar and parametric functions, sequences and series, integration by parts, partial fractions, and Euler's Method, in addition to the topics covered in AT Calculus I.

Advanced Topics in English (AT English: Conflict and Culture in Dramatic Literature; AT English: Unconventional Narratives; AT English: Time and Memory in Literature)

While all English classes at Packer are taught at a high level, AT English engages students who wish to delve into complex, nuanced, and sophisticated texts in a full-year course that encourages advanced scholarly research and the contextualization of works of literature. Conflict and Culture in Dramatic Literature focuses on antagonisms big and small between countries, between religions, and between individuals, as well as their immediate and long-term social and personal consequences. Unconventional Narratives focuses on literature that departs from the conventional with a particular attention to works that break new ground, experiment with structure and storytelling, and offer multiple perspectives. Time and Memory in Literature focuses on the ways in which concepts of time and memory shape the structure, content, and experience of exploring a text. Also, the class looks at ways in which notions of time are culturally encoded.

Advanced Topics in European History (AT European History)

Advanced Topics in European History is a discussion-based course that tracks the evolution of Western society from the 16th century to the 21st century. In the first semester, we use primary sources—journals, letters, arts, literature, and physical remains—alongside scholarly secondary works to trace the intellectual and cultural roots of modern Europe from the Renaissance to the era of the Enlightenment and the French Revolution. In the second semester, students will explore the relationship of industrialism, nationalism, and imperialism to the cataclysmic events of the 20th century: World War I, the Russian Revolution, and World War II. As the culminating project of the course, second-semester students will undertake a long-term archive-based research paper. Advanced Topics in European History provides instruction in how to write analytical essays; interpret maps; evaluate statistical data; analyze architecture, sculpture, and painting; and assess the accuracy of literary and cinematic portrayals of historic events.

Advanced Topics in French (AT French: Always the Stranger and AT French: Revolt and Identity)

These advanced French language, literature and history courses are taught exclusively in French. In addition to further developing the grammar studied in context, they will delve deeply into Francophone history, drawing comparisons between colonial struggles in different parts of the world and the consequences and outcomes of those struggles. Students in these courses study advanced grammar structures as well as sophisticated vocabulary in the context of the texts. They also acquire knowledge of the different literary terms and techniques necessary for analyzing literature, and refine their persuasive and analytical composition-writing skills.

Beginning in 2022-23: Advanced Topics in French I & II

These classes are designed to help students build upon the foundational skills they have gained by adding more accuracy and precision to their use of the language, and to help them deepen their understanding of the Francophone world, more specifically the Francophone Caribbean world and West Africa. By focusing on the Caribbean, namely Haiti, la Martinique, and la Guadeloupe, and Francophone West African countries, including Cameroon and the Democratic Republic of the Congo, the goal of the class is to provide a better understanding of a decolonial history of the region through films, texts, podcasts, interviews, and discussions. These classes are taught exclusively in French, and designed to be highly interactive and student-centered.

Advanced Topics in the History and Literature of Slavery (AT History and Literature of Slavery)

This course takes as its central topic the rise of Atlantic African capitalist slavery, its life in narratives, and its continuing life in our contemporary memory. By examining the links between the enslaved past and present, students investigate the ways in which the "memory" of slavery still weighs upon the present to shape our lives. Students will read historical sources from the time of slavery narrating the lived experience of the enslaved and the slaver, contemporary historical scholarship uncovering themes and patterns in the slave past, and contemporary novels fictionalizing the lives of those bound to the institution of slavery. By Investigating how free and enslaved peoples narrated and lived slavery in the past, as well as how white and Black Americans remember and live slavery today, students must grapple with complex and undying claims the past has on the present.

Advanced Topics in History: The Middle East (AT Middle East)

This Advanced Topics course explores the history of the Middle East, beginning with an investigation of the term "Middle East" and a discussion of socio-cultural, economic, and political diversity within the region. This historical study will include investigations of imperialism and its lasting effects on the region; the rise of nationalism; understandings of modernity, and social, cultural, and political movements, among other topics. Students will engage with scholarly debates and intellectual frameworks that have informed the study of the region, reading texts that include theory, history, anthropology, and memoir. They will interrogate primary and secondary sources throughout the course, developing their critical reading, writing, and research skills.

Advanced Topics in Inorganic Chemistry (AT Chemistry)

AT Inorganic Chemistry is the equivalent of a college-level survey of advanced inorganic chemistry incorporating intensive lab work. Topics will include, among others, kinetics, thermodynamics, and electrochemistry. The course will feature multi-stage labs that culminate in formal reports. Topics will be approached in a way that facilitates a complex array of engagement strategies, involving higher-level mathematics, theoretical modeling, and synthesizing existing knowledge to solve new problems.

Advanced Topics in Latin (AT Latin: Literature of the Roman Empire and AT Latin: Vergil)

In AT Latin: Literature of the Roman Empire, students explore selections from the works of Ovid, Tacitus, Seneca, and others. They investigate the conventions, literary styles, and characteristics associated with these authors and discover the historical, cultural, and political context of the Julio-Claudian and Flavian periods. The course focuses on the various ways that historians, poets, and philosophers questioned the social, economic, and political systems of imperial Rome. In AT Latin: Vergil, students experience the epic Roman poetry of Vergil's Aeneid and discover the conventions, literary styles and characteristics associated with the genre of epic poetry. They explore the cultural and social context within which the literature was created, with an emphasis on the political perspectives and the historical events that accompanied the transition from the end of the Roman Republic to the advent of the Empire. The course is designed to provide students with the guidance, confidence, and skills necessary to read, discuss, and analyze this seminal work of Latin literature.

Advanced Topics in Mathematics: Proof and Structure (AT Math: Proof and Structure)

Advanced Topics in Mathematics: Proof and Structure is a college-level seminar in abstract mathematical reasoning and its applications to the field of discrete mathematics. Students in this course will be challenged not only to find and explain interesting connections in mathematics, but also to subject them to the rigorous standards of mathematical proof. To that end, we will study the prose, structure, and technique of proof, subsequently applying these strategies of mathematical argumentations to problems in set theory, number theory, and combinatorics.

Advanced Topics in Mathematics: Mathematical Symmetry and Transformations (AT Math: Mathematical Symmetry and Transformations)

Students will explore topics in college-level mathematics through problem-solving and proof writing. The class will begin with an overview of proof techniques and mathematical habits of mind before launching into an inquiry-based study of graph theory. Students will also investigate topics in linear algebra, including the theory of matrices, linear transformations, and vector spaces. The course will culminate in a survey of abstract algebra, including groups, rings, and fields. Applications of group theory will be emphasized.

Advanced Topics in Organic Chemistry (AT Organic Chemistry)

In this course, students will develop an understanding of the relationship between chemical structure and function in order to predict and explain patterns of reactivity for organic compounds. The curriculum addresses a range of topics typically found in a college-level organic chemistry course, such as systematic naming, molecular orbital theory, stereochemistry, various reaction mechanisms, and retrosynthetic analysis. Students will come to

a better understanding of the chemistry behind physiological processes discussed in biology, learn to apply the fundamental principles of interactions between organic substances to novel situations, and gain fluency with the basic reactions that allow chemists to build new complex molecules in the laboratory. They will also explore the nexus of organic chemistry, industry, economics, politics, and public opinion.

Advanced Topics in Photography (AT Photography)

Through their creative efforts and their ability to "read" and analyze photographs orally and in writing, students in AT Photography are encouraged to push the limits of their creativity and conceptual understanding. Portfolios will be reviewed by a panel of professional photographers who will give formative feedback during the year as well as a summative evaluation at the end. Students will learn to read images with a more critical mind and eye by increasing their ability to observe with great care and to follow intuitive leads suggested by the content. The students' approach to photography will be multifaceted, a melding of the cognitive, visual, and emotional.

Advanced Topics in Physics (AT Physics)

This course focuses on the development of quantitative and inductive reasoning skills through the study of physics. Working in small groups, students will conduct hands-on activities, often designing their own investigations. These investigations serve as the foundation from which students develop conceptual and mathematical models to explain a wide range of physical phenomena, from dynamics and wave mechanics to optics and electricity and magnetism. Students will also learn basic coding to generate their own computer models that simulate physical phenomena. An overarching goal for students throughout the curriculum is learning to effectively communicate scientific principles to their peers.

Advanced Topics in Spanish (AT Spanish Language, AT Spanish Literature and Culture. Beginning in 2022-23, the AT Spanish courses are AT Spanish I: Human Rights and AT Spanish II: Literature and Culture)

AT Spanish Language and Culture (replaced by AT Spanish I: Human Rights moving forward) is a course in which students work to expand, refine, and put to use their advanced Spanish language skills through the study of a series of thematic units exploring the issues, ideas, and attitudes most compelling to contemporary Spanish speakers in today's world. Working with an array of authentic texts, audio, and other materials, students will focus on reading critically, investigating and questioning historical context, author bias, influences, and tone when tackling readings of various types. AT Spanish Literature and Culture (replaced by AT Spanish II: Literature and Culture moving forward) introduces students to texts such as short stories, novels, poetry, and essays from across the Spanish-speaking world, with a special emphasis on Latin America. Literature is examined within the context of its time and place, as students reflect on the many voices and cultures present in the readings. The course includes a strong focus on cultural connections and comparisons, including exploration of various media such as art, film, articles, and literary criticism. Both courses are conducted entirely in Spanish.

Advanced Topics in Statistics (AT Statistics)

Students will learn how to understand the data and statistics that are pervasive in the world today and to draw their own conclusions. By examining how data and statistics are gathered, how they are analyzed and what conclusions can and should be made, students will become statistically literate. Students will dissect headlines touting recommendations based on research and dig deeper with careful readings of scientific studies. Students will also study the designs of classic experiments from the field of psychology and behavioral economics, and will design and implement their own statistical studies and experiments.

Advanced Topics in Studio Art (AT Studio Art)

With an emphasis on painting, printmaking, mixed media, and drawing, this course encourages students to discover, develop, and push their creativity. Students will create a portfolio that will place a strong focus on the development of personal voice and encourage creative thinking and problem solving. Using New York City galleries and museums to inspire their own work, students will learn to be self-reflective and make connection with larger audiences.
